Despite Ukraine"s ongoing conflict with Russia, the country"s solar sector continues to develop. Lena Dias Martins reports on the opportunities solar developers are finding amid the horrors of war.

Installed renewable capacity in Ukraine is growing. This was the message from Maksym Sysoiev, partner at global law firm Dentons, at the "Large Scale Solar Summit Central Eastern Europe" (LSS CEE) late last year, hosted by PV Tech Power publisher, Solar Media. "Despite the odds," Sysoiev added, new solar plants are being implemented and completed.

Although the precise installed capacity of solar and other technologies in Ukraine is now considered restricted information, the country"s renewables sector is growing, as memorably illustrated by The Guardian last May, which revealed that Ukraine had built more onshore wind turbines since Russia invaded Ukraine in February 2022 than the UK.

Addressing the Energy Security Forum 2024 in February, Andrii Gerus, the chairman of the committee on energy, housing and utilities, revealed that Ukraine commissioned roughly 500MW of solar power plants over the year, noting that renewable generation "significantly helps to ensure the stable operation of the power system".

"I also believe that 2024 will be a year of investment and launch of energy storage facilities. I think we will not see isolated cases, as it was before, but a number of interesting and useful projects for the energy system," added Gerus.
