

Utility-scale solar yemen

In the last decade, solar power capacity has grown tremendously to become the fastest-growing source of renewable energy in the world.

Solar power directly contributes to the Yemen's energy security and independence, as well as helping to meet rising electricity demand and CO2 emission reduction goals.

The rapid solar photovoltaic installations were primarily due to ongoing supportive government policies and initiatives and a sharp decline in technology and PV system costs.

Further, a growing number of governments and companies are setting up and pursuing climate-neutral/net-zero emissions targets, commitments and goals that are propelling both solar photovoltaic (PV) market and wind power installation growth, globally.

According to Blackridge Research, the outlook for solar PV installation remains strong in the medium term, and the market is expected to expand during the forecast period due to compelling economics, and decarbonization commitments by various stakeholders.

Blackridge Research's Yemen Solar Power Market Outlook report consolidate the developments and build a perspective on growth from the point of view of the solar sector, in its current and future role.

The report provides a comprehensive analysis of the historical development, the current state of solar power installation scenario, and its outlook.

The majority of data in the report have been derived from multiple bottom-up and top-down analyses, as well as proprietary models, databases, and offerings – Solar Intelligence Hub and Global Project Tracker Service built from public and exclusive sources over the years.

The insights include but are not limited to the market data, solar PV installation data and capacity additions data and forecast, government policies and regulations, project data (upcoming solar power projects, under-construction projects, and operating/commissioned solar power plants), company profiles of major players, and competitive landscape analysis.

The market research report covers market dynamics, growth potential of the photovoltaic (PV) and concentrated solar power (CSP) markets, economic trends, and investment & financing scenario in the Yemen.

Further, the report looks at the current state and assesses the potential of residential, non-residential, and

Utility-scale solar yemen

utility-scale solar PV deployment.

Special attention is given to depicting the impact of the ongoing COVID-19 pandemic and changes in the government policies and regulatory landscape.
