Kerri Carnes, APS"s director of customer-to-grid solutions, said that getting this kind of granular control will be increasingly important as the utility"s share of smart-thermostat-enabled capacity grows from about 200megawatts as of this year to nearly 1gigawatt by the end of the decade.

"These are savings that flow to all our customers," Carnes said

Jeff St. John is director of news and special projects at Canary Media. He covers innovative grid technologies, rooftop solar and batteries, clean hydrogen, EV charging, and more.

Combining state-of-the-art analytical techniques - including sophisticated data analytics - and practical industry experience, Brattle answers economic, financial, and regulatory questions across a wide range of practice areas and sectors.

Brattle consultants are sought-after speakers, presenters, and authors. Learn more about the publications, events, and recent news that our experts are involved in.

Intellectual curiosity, a passion for principles, a strong team orientation, and respect for clients and colleagues are part of the Brattle DNA. We"re always seeking bright, collaborative professionals to join our team.

At Brattle, our teams of experts answer complex economic, regulatory, and financial questions for corporations, law firms, and governments around the world. We aim for the highest levels of client service and quality in our industry.

Real Reliability: The Value of Virtual Power provides an introduction to VPPs and models their value and performance versus conventional resource adequacy options. It compares the net cost of providing 400 MW of resource adequacy from three resource types: a natural gas peaker, a transmission-connected utility-scale battery, and a VPP composed of residential demand flexibility technologies. The study also identifies key near-term activities for enabling the deployment of VPPs, which currently are adopted well below their market potential.
