3. Mobile Apps: The mobile application provides an interface between the user and the system. It gives you the ability to control or monitor your smart devices remotely. They can be easily downloaded with the help of a provided application on mobile and provide access control of the system, power controls, timer access, and many more things.

Three steps are followed in Home automation as follows:

A smart home is a residence that uses internet-connected devices to enable the remote monitoring and management of appliances and systems, such as lighting and heating.

Smart home technology -- also often referred to as home automation or domotics from the Latin word domus, meaning home -- provides homeowners security, comfort, convenience and energy efficiency by letting them control smart devices, often using a smart home app on their smartphone or another networked device.

A part of the internet of things (IoT), smart home systems and devices often operate together, sharing consumer usage data among themselves and automating actions based on the homeowners' preferences.

A smart home isn't a collection of disparate smart devices and appliances, but rather ones that work together to create a remotely controllable network.

All devices -- such as lights, thermostats, security systems and appliances -- are controlled by a master home automation controller, often called a smart home hub. This hub is a hardware device that acts as the central point of the smart home system and can sense, process data and communicate wirelessly. It combines all the disparate apps into a single smart home app that homeowners can control remotely. Examples of smart home hubs include Amazon Echo, Google Home and Wink Hub. While many smart home products use Wi-Fi and Bluetooth to connect to the smart home network, others depend on wireless protocols such as Zigbee or Z-Wave.

Smart home devices can be either programmed to follow specific schedules or commands or they can be set to respond to voice commands through home assistants such as Amazon Alexa or Google Assistant. For example, a smart thermostat can learn the homeowner's habits and automatically adjust the temperature based

on their specific schedule.

Nearly every aspect of life where technology has entered the domestic space -- including lightbulbs, dishwashers and other appliances -- has seen the introduction of a smart home alternative:
