

Which type of solar panel is best

Which type of solar panel is best

As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual, useful information so that you can make informed home electrification and financial decisions. We have:

Sourced the majority of our data from hundreds of thousands of quotes through our own marketplace.

Incorporated third-party data and information from primary sources, government agencies, educational institutions, peer-reviewed research, or well-researched nonprofit organizations.

Built our own database and rating system for solar equipment, including solar panels, inverters, and batteries.

We won't charge you anything to get quotes through our marketplace. Instead, installers and other service providers pay us a small fee to participate after we vet them for reliability and suitability. To learn more, read about how we make money, our Dispute Resolution Service, and our Editorial Guidelines.

The type of solar panel you need depends on the type of system you want to install. For a traditional rooftop solar panel system, you'll usually want monocrystalline panels due to their high efficiency. If you have a big roof with a lot of space, you might choose polycrystalline panels to save money upfront. Want to DIY a portable solar setup on an RV or boat? Thin-film solar panels are a great option.

Over the last 130 years, solar panel technology has evolved in the pursuit of higher efficiency, lower costs, aesthetics, and durability. While each of the three modern designs comes with advantages, the current solar panel market tends to align panel technology with the most cost-effective and savings-driven application.

The three main types of solar panels are monocrystalline, polycrystalline, and thin film.

Monocrystalline solar panels are the most efficient.

Polycrystalline solar panels can be the most cost-effective.

Thin-film solar panels can be the best for DIY projects or RVs.

There are three major types of solar panels: monocrystalline, polycrystalline, and thin-film. The solar panel type best suited for your installation will depend on your preferences and factors specific to your own property.
