Wind turbine power output handheld

SHINE 2.0 | [LEARN MORE?](#)

Maximize your power generation with the Shine Duo. This bundle features two 40W Shine Turbines for charging handheld electronics. Compact, lightweight, and easy to set up, these portable wind turbines allow you to capture the power of the wind wherever you are. Gift one to a friend or keep both for yourself --the choice is yours!

Shine Duo is backordered and will ship as soon as it is back in stock.

The world's first portable wind turbine that has all the functionality of a large wind turbine, scaled down to fit in your backpack. With Shine you can generate power anytime, anywhere the wind blows.

"To live sustainably, we need to rethink the ways in which we create and use energy," said Rachel Carr, Chief Marketing Officer of Aurea Technologies and co-creator of the Shine Turbine. "The simplicity of Shine's design, two-minute setup, and ability to rapidly generate and store power, does just that. It's a game-changer in allowing people to access wind energy while away from the electrical grid."

company: Aurea Technologies Inc.

type: portable wind turbine

happening this week! florim ceramiche spa creates porcelain stoneware ceramic surfaces for all architecture, building industry and interior design needs, overseeing many brands in europe, america and asia including floor gres, rex, cerim, casa dolce casa - casamood, FLORIM stone, and CEDIT - ceramiche d'italia.

Do you use portable power banks that die in a few hours, solar chargers that rarely create usable power, or bulky power stations that are hard to pack and heavy to carry? It's time to use clean, efficient wind energy to power your devices!

Aurea Technologies, a Halifax startup led by two young entrepreneurs (Cat Adalay and Rachel Carr), has launched the Shine Turbine, an ultra-compact lightweight wind turbine that offers unrivaled performance for outdoor enthusiasts who need to recharge electronic devices. The wind charger easily powers handheld electronics such as phones, tablets, lights, cameras, etc ; anytime, anywhere the wind blows.

This portable wind turbine collapses into about the size of a 1,000 ml water bottle and fits snugly in your backpack. It's extremely fast at generating and storing electricity in a range of weather conditions. It is

Wind turbine power output handheld

the first of a series of renewable power devices designed by the startup to provide freedom from the electrical grid.

Shine is a 3-pound (1.36 kg), 40-watt wind turbine that can both charge handheld devices directly or stores power in its 12,000 mAh internal lithium-ion battery for later use. This mini turbine can also be pre-charged at home using a standard wall outlet. According to Aurea, the battery has enough capacity to charge four mobile phones to 100%, so it is great for sharing power or keeping multiple devices charged.
