

Wind turbine solar inverter not working

Wind turbine solar inverter not working

Here's how to troubleshoot:

The turbine never seems to reach its operating speed and does not give any or very little power output.
Potential Causes: You may have installed a 24V turbine on a 12V battery system.

I have a 5.4kw grid tied turbine that is not installed yet. I am looking into an enphase storage battery system (currently have 9.88kw enphase solar system installed and working). The wind turbine operates essentially the same as your microinverters - requires grid present to make power, shuts off if grid outage etc.

One of the big advantages of a combination wind and solar power system is that often--not always, but often--when sunlight decreases, wind increases and vice-versa. When there's not enough wind to turn your turbines, your solar panels can make up the difference.
