Yamoussoukro specific companies and products

SMERGERS scrutinizes all profiles and only features a select group of businesses, investors, advisors that meet a basic requirement. When required, certain members may have submitted some form of proof ...read more

We regularly filter out businesses which are inactive or have already closed a transaction. Typically, if the business is actively looking to sell/raise capital, the status is shown in green.

We understand the level of confidentiality required in strategic transactions and we strive to provide a safe and secure experience for our members. Please review our privacy policy. We ...read more

Buying an existing business is generally an easier way to start a business with an immediate head start. It saves valuable time and administrative efforts, considering starting from scratch is ...read more

Our new laboratory in Yamoussoukro will support the growing Ivory Coast mining industry.

Ivory Coast has huge untapped resources. It is estimated that two-thirds of the country is covered in untapped mineral deposits. Gold remains one of Ivory Coast's most valuable mineral resources. Output rose significantly in the previous decade, from 12 tonnes in 2011 to 25 tonnes in 2017 and around 32.5 tonnes in 2019.

To support the country's growing gold mining industry, we have opened a new commercial laboratory in Yamoussoukro. The laboratory, equipped with atomic absorption spectrometry (AAS) and fire assay equipment, provides an extensive range of services related to sample preparation and fire assay analytical testing.

Strategically located in central Ivory Coast, the Yamoussoukro laboratory is close to key mining exploration sites. SGS employees are on hand seven days a week, supporting discoveries for greenfield as well as brownfield projects by providing full fire assay analyses with quick turnaround times.

Aurelien Nguessan, laboratory manager, said, "SGS can now offer mining exploration companies in Ivory Coast complete support, going above and beyond our existing sample preparation capabilities. It's an exciting time for the industry and for the country as a whole."

This new laboratory will complement the services already offered by our commercial geochemistry labs in the region, including those in Tarkwa in Ghana, Bamako in Mali and Ouagadougou in Burkina Faso.
